Coronavirus Disease 2019 (COVID-19)
Frequently Asked Questions
Updated June 25, 2020

Under Governor Larry Hogan’s direction, state agencies continue to develop comprehensive and coordinated prevention and response plans for coronavirus disease 2019 (COVID-19).

The Maryland Department of Health (MDH) will communicate directly with the public, providing updates as this situation develops and accurate information about how to protect yourself and your family.

If you have questions about COVID-19 that are not answered here, call your local health department or dial 2-1-1.

What is COVID-19?
COVID-19 is a disease caused by a respiratory virus first identified in Wuhan, Hubei Province, China in December 2019. COVID-19 a new virus that hasn’t caused illness in humans before. Worldwide, COVID-19 has resulted in thousands of human infections, causing illness and in some cases death. Cases have spread throughout the world, with more cases reported daily.

What is the current COVID-19 situation in Maryland?

Up-to-date information about testing and case counts in Maryland is available at coronavirus.maryland.gov. The page is updated daily.

On May 13, Governor Larry Hogan announced the beginning of Stage One of the ‘Maryland Strong: Roadmap to Recovery,’ which includes moving from a Stay at Home order to a Safer at Home public health advisory and the gradual reopening of retail, manufacturing, houses of worship, and some personal services.

On June 5, Maryland moved into Stage Two of recovery with the safe and gradual reopening of workplaces and non-essential businesses. Additional reopenings through Stage Two were announced on June 10, which allowed indoor dining and outdoor amusements to resume on June 12.

As with Stage One, Stage Two is being implemented with a flexible, community-based approach that empowers each jurisdiction to make decisions about the timing of reopening. For the reopening status of Maryland’s jurisdictions, please visit https://governor.maryland.gov/recovery/.

Older adults and those people with underlying health conditions, who are vulnerable to serious illness from COVID-19, are strongly advised to continue staying home as much as possible. Employers should continue to encourage telework for their employees when possible and people who can work from home should continue to do so. All Marylanders should continue wearing masks in indoor public areas, retail stores, and on public transportation.

Information about the Hogan administration’s ongoing response to COVID-19 is available at https://governor.maryland.gov/coronavirus/.

What are risk factors for serious illness from COVID-19?
Everyone is at risk for COVID-19. However, symptoms can range from mild to severe and may have different complications for each person.

Older people, age 60 and above, and those with pre-existing medical conditions have a higher risk for serious illness from COVID-19. Examples of pre-existing medical conditions include: cancer, diabetes, heart disease or other conditions impacting the immune system’s ability to fight germs.

While older people and those with pre-existing conditions are at a higher risk, current MDH data shows that the majority of infections are in adults under 60 years of age. People of all ages need to practice social distancing to prevent the spread of COVID-19.

How does COVID-19 spread?
- Between people who are in close contact with one another (within about 6 feet)
- Through respiratory droplets produced when an infected person coughs, sneezes or talks
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs
- Some people without symptoms may be able to spread the virus

The best way to prevent illness is to avoid being exposed to COVID-19.

What are the symptoms of COVID-19?
Symptoms, or combinations of symptoms, that may appear 2-14 days after exposure include:
- Cough
- Shortness of breath or difficulty breathing
- Fever
- Chills
- Fatigue
• Muscle pain
• Sore throat
• Congestion or runny nose
• New loss of taste or smell
• In more severe cases, pneumonia (infection in the lungs)

Other less common symptoms have been reported, including gastrointestinal symptoms like nausea, vomiting or diarrhea.

**What should I do if I think I am sick with COVID-19?**
If you become sick with fever, cough or have difficulty breathing, contact your health care provider, especially if you are over 60 years of age or have pre-existing medical conditions. If you do not have a health care provider, contact your local health department. Follow these steps:

- Call your health care provider, local health department or emergency room before you go
- Tell them about your symptoms, any recent travel and close contacts (such as people in your household)
- Wear a mask

**If someone has COVID-19, what will happen to them?**
The vast majority of people recover from this infection. Most people will have mild or moderate symptoms. Most people may be advised to recover at home and isolate themselves from others. These individuals should call their physicians or health care practitioners if their symptoms get worse.

Some COVID-19 infections can lead to serious illness, and in some cases death. If someone has a more serious illness from COVID-19, they may be admitted to the hospital.

**Should I wear a face mask?**
On April 15, Gov. Hogan issued an executive order directing that effective April 18, all Marylanders are required to wear face coverings when inside retail establishments or when riding any form of public transportation in the state. Read the executive order at [https://governor.maryland.gov/wp-content/uploads/2020/04/Masks-and-Physical-Distancing-4.15.20.pdf](https://governor.maryland.gov/wp-content/uploads/2020/04/Masks-and-Physical-Distancing-4.15.20.pdf)

Cloth face coverings can be made from household items and include wearing a scarf or bandanna that covers the nose and mouth. The CDC has detailed guidance and instructions regarding homemade cloth face coverings available at [https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html](https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html)

Cloth face coverings should not be placed on young children under age 2, anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance. People with disabilities who are unable to wear a mask are provided reasonable
accommodations per the Americans with Disabilities Act.

The cloth face coverings recommended are not surgical masks or N-95 respirators. Those are critical supplies that must continue to be reserved for healthcare workers and other medical first responders, as recommended by current CDC guidance.

**Should I cancel plans to travel?**
The Centers for Disease Control and Prevention (CDC) is updating travel advisories as warranted.

CDC does not generally issue advisories or restrictions for travel within the United States. However, cases of coronavirus disease (COVID-19) have been reported in all states, and some areas are experiencing community spread of the disease.

At this time, the CDC recommends that travelers avoid all nonessential international travel. If you must travel:

- Avoid contact with sick people.
- Wear a cloth face covering in public.
- Avoid touching your eyes, nose, or mouth.
- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not readily available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.
- It is especially important to clean hands after going to the bathroom; before eating; and after coughing, sneezing or blowing your nose.
- Avoid close contact with others.
- Avoid traveling if you are sick.

People who are at increased risk for serious illness are also advised to avoid nonessential air travel.

Visit the CDC travel advisory site to check on current travel warnings if you are planning a trip abroad: [https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html](https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html).

**What can I do to protect myself and others?**
Take everyday preventive steps to slow the spread of COVID-19:

- Wash your hands often with soap and warm water for at least 20 seconds
- Use an alcohol-based hand sanitizer with at least 60 percent alcohol if soap and water are not available
- Cover your coughs and sneezes with a tissue, your sleeve or your elbow
- Avoid touching your eyes, nose and mouth
- Clean and disinfect frequently touched objects and surfaces using standard cleaning practices

Practice social distancing — keep distance between yourself and others and avoid crowds
Cover your mouth and nose with a cloth face cover when around others
Avoid close contact with people who are sick
If you are sick, stay home, except when seeking medical care

What is social distancing?
The best way to slow the spread of COVID-19 is through “social distancing,” which means avoiding close contact with others. Social distancing can take many forms, depending on your lifestyle and your family or living situation. Social distancing can include the following habits and steps:

- Avoid handshaking, hugging and other intimate types of greeting
- Avoid non-essential travel (your health care provider may have specific guidance for your situation)
- Avoid crowds, especially in poorly ventilated spaces
- Work from home if possible for your work situation
- Avoid unnecessary errands — consider ways to have essential items, like food and other household supplies, brought to you through delivery services or through family or social networks

It is recommended that those at a high risk of becoming seriously ill from COVID-19 stay home as much as possible and contact their health care provider.

While social distancing and self-quarantine are needed to limit and control the spread of the disease, social connectedness is important. Virtual resources can and should be used during this time. Talk to your friends and family on the phone or over video to stay connected.

Is there a vaccine or medicine I can get for COVID-19?
Not yet, because COVID-19 is a new disease. However, many experts are at work developing one. As with any new vaccine, it must be tested to make certain it is safe and effective. It may take more than a year for a COVID-19 vaccine to become readily available.

There is also no specific medicine currently available to cure COVID-19. However, people who have COVID-19 should seek medical care to help lessen the severity of their symptoms.

How can I be more prepared for COVID-19?
- Have an adequate supply of nonprescriptive drugs and other health supplies on hand, including pain relievers, stomach remedies, cough and cold medicines
- Check your regular prescription drugs to make sure you have an adequate supply; refill your prescriptions if needed
- Have a thermometer, tissues and hand sanitizer in case you become ill and must stay at home to recover
- Talk with family members and loved ones about how they would be cared for if they got sick and what will be needed to care for them at home
- Have a two-week supply of water and food available at home
Can I get tested for COVID-19?
State officials encourage anyone who wants to be tested for COVID-19 to get tested, including people who do not have symptoms.

For more information about COVID-19 testing and a list of testing sites in Maryland, please visit https://coronavirus.maryland.gov/pages/symptoms-testing.

Will the Maryland Department of Health test animals for coronavirus?
In accordance with current federal guidelines, the Maryland Department of Health will not be testing the general companion animal population. To date, there is no evidence that domestic animals, including pets, can spread the SARS-CoV-2 (COVID-19) virus. Because the situation is ever-evolving, public and animal health officials may decide to test certain animals out of an abundance of caution. The decision to test will be made collaboratively between local, state and/or federal public and animal health officials.

For more information, please visit the AVMA COVID-19 website at https://www.avma.org/resources-tools/animal-health-and-welfare/covid-19.

Is there anything else I should know?
Do not stigmatize people of any specific ethnicities or racial background. Viruses do not target people from specific populations, ethnicities or racial backgrounds.

Stay informed and seek information from reliable, official sources. Be wary of myths, rumors and misinformation circulating online and elsewhere. Health information shared through social media is frequently inaccurate, unless coming from an official, reliable source such as the CDC, MDH or local health departments.

Are there additional resources available for specific groups, such as businesses?
The CDC provides current information about COVID-19 at cdc.gov.
