Impact of the Cigarette Restitution Fund Program on Cancer Mortality in Maryland

Carlessia H. Hussein, DrPH, RN;
David A. Mann, MD, PhD

Maryland Department of Health and Mental Hygiene
Cigarette Restitution Fund Program, and
Office of Minority Health and Health Disparities
CIGARETTE RESTITUTION FUND PROGRAM - History

- Tobacco Manufacturers agreed to pay $206 billion over 25 years and beyond - 1998
- Maryland established Cigarette Restitution Fund to receive $200 M annually - 1999
- Maryland CRF programs funds were dedicated to the control of cancer, tobacco-use, tobacco-related diseases, substance abuse and the conversion of tobacco crop to other uses
- 7 targeted cancers were identified that accounted for 57% mortality in 1997; lung, colorectal, breast, prostate, oral, Melanoma and cervix
CIGARETTE RESTITUTION FUND PROGRAM – Mission and Vision

• MISSION

• To reduce the use of tobacco products in Maryland and thereby reduce tobacco-related disease
• To reduce mortality from cancer in Maryland
• To reduce disparities in Maryland from cancer and tobacco-related disease among ethnic and racial minorities

• VISION

• The Cigarette Restitution Fund Program envisions a future Maryland free of cancer and disability due to tobacco use and where health disparities are eliminated resulting in the highest level of health for all Marylanders
PROGRAM DESCRIPTION

• Local Public Health – Cancer and Tobacco Programs
  – Counties and Academic Health Centers provide cancer education, screening and treatment
  – Counties provide tobacco awareness, education, smoking cessation and prevention activities
  – Establishes partnerships at local levels between schools, communities, and health providers

• Surveillance and Evaluation – Cancer and Tobacco Programs
  – State collects, analyses and reports cancer incidence, morbidity and mortality by jurisdiction
  – State collects, analyses and reports tobacco-use among adults and youth
• **Statewide Academic Health Centers – Cancer Program**
  – Johns Hopkins and University of Maryland Medical Group – Cancer Research Grants
  – University of Maryland Medical Group – Tobacco-Related Diseases (76+ research grants)
  – University of Maryland Medical Group - Statewide Health Network (32 tele-health linkages)

• **Minority Outreach and Technical Assistance – Cancer and Tobacco Programs**
  – Engages minorities in the CRFP in local jurisdictions to reduce ethnic and racial disparities
  – Assists local health departments to reach minority, remote and hard-to-reach groups
  – Promotes partnerships and increases cultural competence between minorities and CRFP providers
PROGRAM DESCRIPTION (3)

- **Media and Public Relations Campaign – Tobacco Program**
  - Launched the Maryland Tobacco Quitline through multi-media outlets and events - 2007
  - Expanded the scope and content of the website, www.SmokingStopsHere.com

- **Statewide Public Health – Tobacco Program**
  - Provides legal assistance to local health departments, elected officials and individuals
  - Maintains website containing tobacco control information.
ACCOMPLISHMENTS

• Cancer Mortality is down: Maryland ranks 23 among states, down from 9th in 1995

• Maryland ranks 23rd in colorectal cancer deaths, down from 3rd highest 1996-2000

• Cancer mortality disparity between Blacks and Whites reduced by 50% between 2000 and 2005

• CRF Investment pays returns: Academics have leveraged almost $300 million

• Adult tobacco use is down for males, females and minorities

• Underage tobacco use is down: 49% reduction in middle school & 36% in high school

• High demand for smoking cessation continues
CHALLENGES

A. Extra effort is needed to reach the very hard to reach

B. Maintain vigilance to hold the gains in colorectal cancer mortality

C. Expand program focus on the other targeted cancers
Ratio or Difference to Measure Trends in Health Disparities?

- Hypothetical mortality rates: (deaths per 100,000)

Tracking Progress in Health Disparities

• Three questions matter, when comparing a minority group to the white population:

  – 1. Are the groups different for this outcome?
    • Is there vertical separation of the trend lines?
  – 2. Is either group changing over time?
    • Are trend line slopes different from zero?
  – 3. Are the groups making progress differently?
    • Do the groups have different trend line slopes?
    • Is the vertical separation changing?

Rates are the three-year average rate for the time periods indicated.
Conclusions

• Cancer mortality has declined in Maryland from 2000 to 2005.
• Colo-rectal cancer mortality has fallen by about 20% from 2000 to 2004.
• The cancer mortality disparity between African Americans and Whites has been reduced by half from 2000 to 2005.
• The timing and areas of greatest impact are consistent with the activities of the CRFP
