No matter how upset or angry you feel ... 

DO NOT SHAKE THE BABY!

A baby’s brain is fragile and easily injured inside the infant’s skull!

Shaking a baby can cause:

♦ Brain Damage
♦ Hearing Loss
♦ Learning Problems
♦ Seizures
♦ Cerebral Palsy
♦ DEATH

Never hold or pick up a baby or toddler when you feel angry.

Please let the baby cry it out rather than shaking or punishing the baby. The constant crying will stop when the baby gets older.

Be sure to tell EVERYONE who takes care of your child NEVER to shake him or her for ANY reason.

Not even for a second!

The services and facilities of the Maryland Department of Health and Mental Hygiene (DHMH) are operated on a non-discriminatory basis. This policy prohibits discrimination on the basis of race, color, sex, or national origin and applies to the provisions of employment and granting of advantages, privileges and accommodations.

The Department, in compliance with the Americans With Disabilities Act, ensures that qualified individuals with disabilities are given an opportunity to participate in and benefit from DHMH services, programs, benefits, and employment opportunities.

May 2011
No one likes to listen to a baby cry for a long time. It is very stressful.

Some babies cry a lot when they are:

- WET
- HUNGRY
- TIRED

Some cry when they want company ~ often when you are busy or want to sleep! Feeding or changing them may help, but even that doesn’t work sometimes.

If your baby won’t stop crying there may be a medical reason.

Take your baby to the doctor to see if he or she can find a reason for the crying.

Some babies have “colic.” These babies sometimes cry for a long time. “Colicky” babies often pull their legs up to their chest over and over. They will grow out of it soon.

Have a plan!

Try these when your baby keeps on crying:

- Check the baby’s diaper.
- Check if the baby is hungry or thirsty.
- Talk to the baby calmly.
- Gently hug and cuddle the baby.
- Gently rub the baby’s back.
- Sing to the baby or play gentle music.
- Take the baby for a walk.
- Give the baby a soothing bath.
- Take some deep breaths; you are doing the best you can!
- Take the baby for a ride in the car. Please be sure to put the baby in a child safety seat.
- If you feel tired and upset, call someone you and the baby know well for help. Ask them to watch the baby so that you can take a break.

Go ahead and take a break but never, never, never shake!
